

Mesothelioma Fund

At the Mesothelioma Fund our mission and primary focus is to support mesothelioma victims and their families through their journey. We help through communication, compensation and care. We have partnered with medical experts to provide clients with information kits about the disease, treatments and financial options. We also help asbestos-exposure victims determine the sites and years of exposure, obtain the necessary physician certifications, and secure the critical documentation to ease the process of asbestos bankruptcy trust claims. We have worked collaboratively with the leading physicians and cancer centers in the country so our patients can have access to cutting-edge treatments and pioneering clinical trials.

Diabetes Knowledge

Real life diabetic experiences with diabetes knowledge in fitness, exercise programs, low-carb diets and nutrition to help people manage blood sugar levels.

Public Health Degrees

Public Health Online is dedicated to those researching educational opportunities within public health to help make

the decision to get a degree, go back to get a degree, or further their education with a master's or doctoral degree in public health. We also offer a variety of resources to include mental health topics and nicotine and vaping cessation.

Mesothelioma

Our goal is to spread the word about mesothelioma, a rare cancer that affects protective membranes surrounding lungs, heart and abdominal cavity that's mainly caused by asbestos exposure. We provide free informational books, packets and a Patient Advocacy program that works 1-on-1 with individuals to help them find local doctors, treatment centers and support groups.

Our organization is a resource to help anyone suffering from mesothelioma find free care and support.

Please take a look at some of the great information we have.

British Paediatric Surveillance Unit

The site contains information on the rare disease work the unit facilitates. Importantly it has a section on Public

Pancreatic Cancer UK

Our Research Involvement Network is a group of people who each have a personal connection to pancreatic cancer, including patients, carers, loved ones and survivors. The group has a diverse range of views and experiences and can provide researchers with insights that inform and shape their work. This ensures that only the highest quality research is being conducted.

North West People in Research Forum

The North West People in Research Forum (NWPiRF) is devoted to supporting patient and public involvement and public engagement in health and social care research in the North West of England. The NWPiRF website includes: information, guidance, good practice examples, relevant websites and more for members of the public and researchers; information about news, developments and events in public involvement and engagement in research; and opportunities for members of the public to become actively involved in health and social care research.

Patients Active in Research Thames Valley

Patients Active in Research promotes partnerships between patients, carers, other members of the public, and medical researchers in the Thames Valley. It has been developed with patients and aims to ensure that medical research focuses on what really matters to those affected by ill health and is carried out in ways that encourage them to take part.

People and Research West of England

People and Research West of England is a collaborative partnership of local organisations supporting researchers to involve the public in health and social care research, and supporting the public to get involved.

NHS Involvement

NHS Involvement brings people together to give the public more opportunities to take part in healthcare decision-making, as well as information about services. It offers people who work in engagement the support, guidance and contacts to reach deeper into communities and make a real difference.

Involvement is a Patient and Public Participation (PPP) programme which Midlands and Lancashire Commissioning Support Unit has been commissioned to deliver by NHS England.

European Communication on Research Awareness Needs (ECRAN) Project

ECRAN aims to improve EU citizens' knowledge about medical research and support their participation in clinical trials. The site has videos about clinical trials, games, and a searchable inventory of resources.

Improving Dementia Education and Awareness (IDEA)

IDEA is an online learning centre to improve the care and quality of life of people with dementia. It is a one-stop website where you will find information and resources including online courses and a range of audio-visual materials about dementia, its causes, treatment and the care of people affected. There are also forums where carers and professionals can share good practice in the area of dementia care. The University of Nottingham Patient and Public Involvement group for people with dementia and their carers provided feedback on IDEA during the piloting phase. This is also a useful resource

for researchers who are actively involved with people with dementia and their carers.
